

Final Joint r7: paired external confirmation differences across 20 logs

936 Actors retained; within-Actor observation weights, then independent-log means.

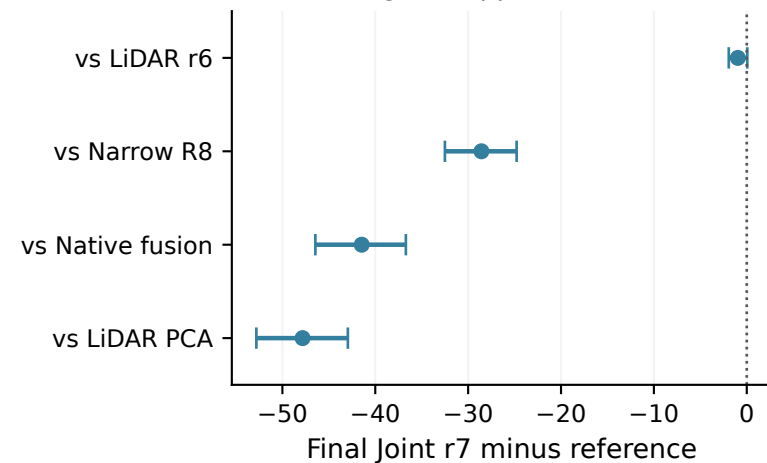

Hit rate (pp; higher better)

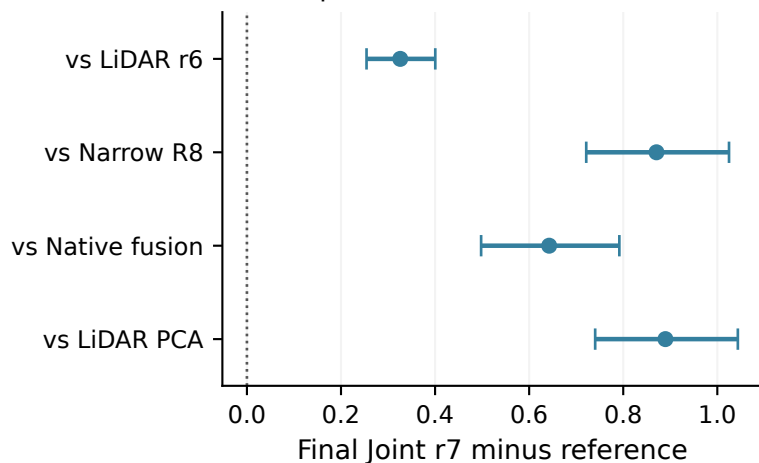

Early rate (pp; lower better)

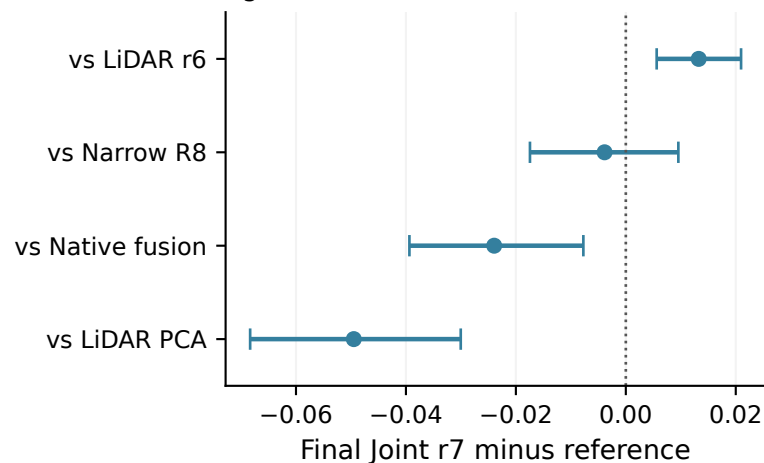

Missing rate (pp; lower better)

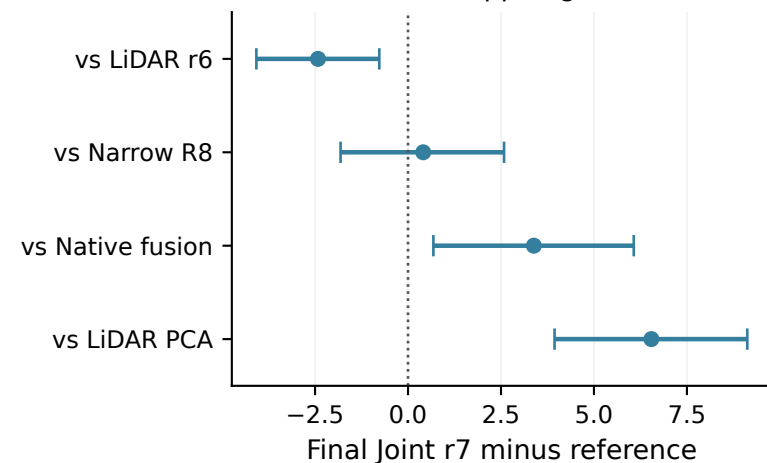

Free-space intrusion (m; lower better)

Target-to-surface distance (m; lower better)

Surface recall (pp; higher better)

Bars: saved 95% log bootstrap intervals (10,000 resamples, seed 7304). No new inference or resampling.
Fixed weights and build-only inputs; cross-dataset AV2 confirmation, no adaptation or model selection.
