

Fixed canonical surface + edited rigid trajectory: all four moving Actors in one old AV2 window

Each column edits one Actor only; original background, other Actors and per-return-time query beams stay fixed

Fixed LiDAR-only r9 surface; first registered heldout scan. Light dots: surface centers at reference time; colored crosses: actual per-return-time first intersections.
No edited ground truth or accuracy claim. Original observed-return beam subset only; unknown disoccluded background is not filled. BEV clipping is for display only.
