

02678d04 | Near-equal input gaps, different generated feedback

Same initial RGB / DVGT range / seed 42 | Input near-gap difference: -3.9 mm | 117 frames, 15 decisions

(a) Recorded initial RGB

Shared initial frame; route, terrain, other actors and relative future motion fixed. Green boxes: actual policy detections.

(b) Fixed class dimensions
Generated RGB at 2.80 s

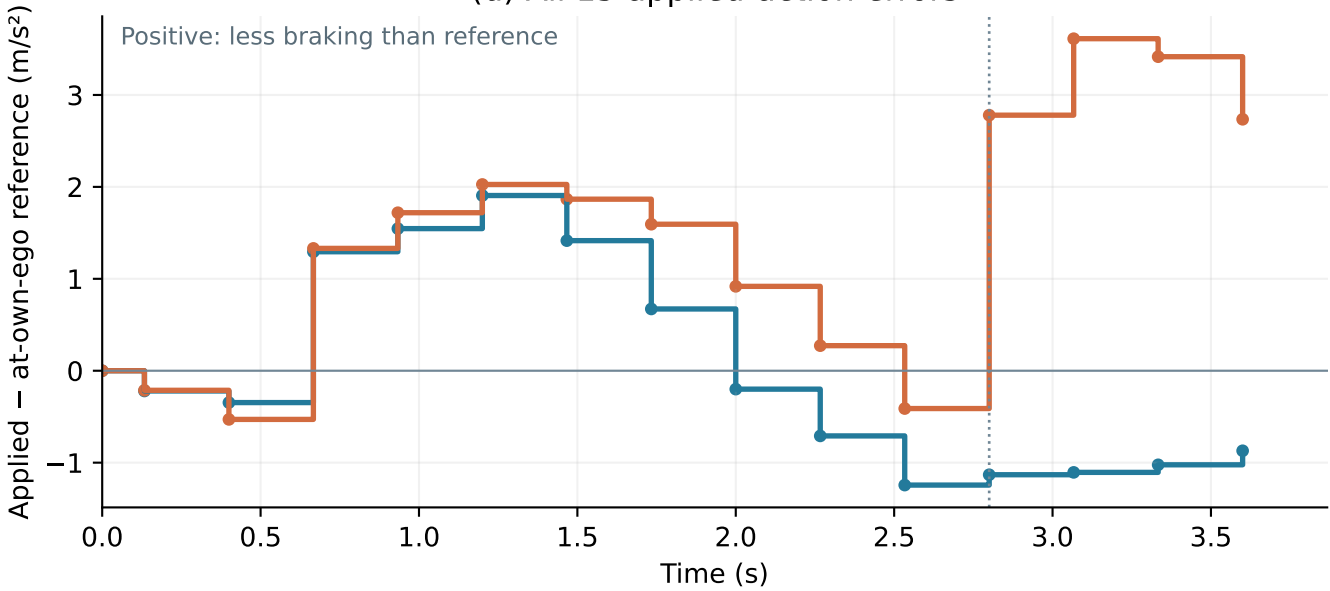

Input L/W/H: 3.90 / 1.60 / 1.56 m
Applied acceleration: -2.49 m/s²
At-own-ego reference: -1.35 m/s²

(c) Visible-extent fit
Generated RGB at 2.80 s

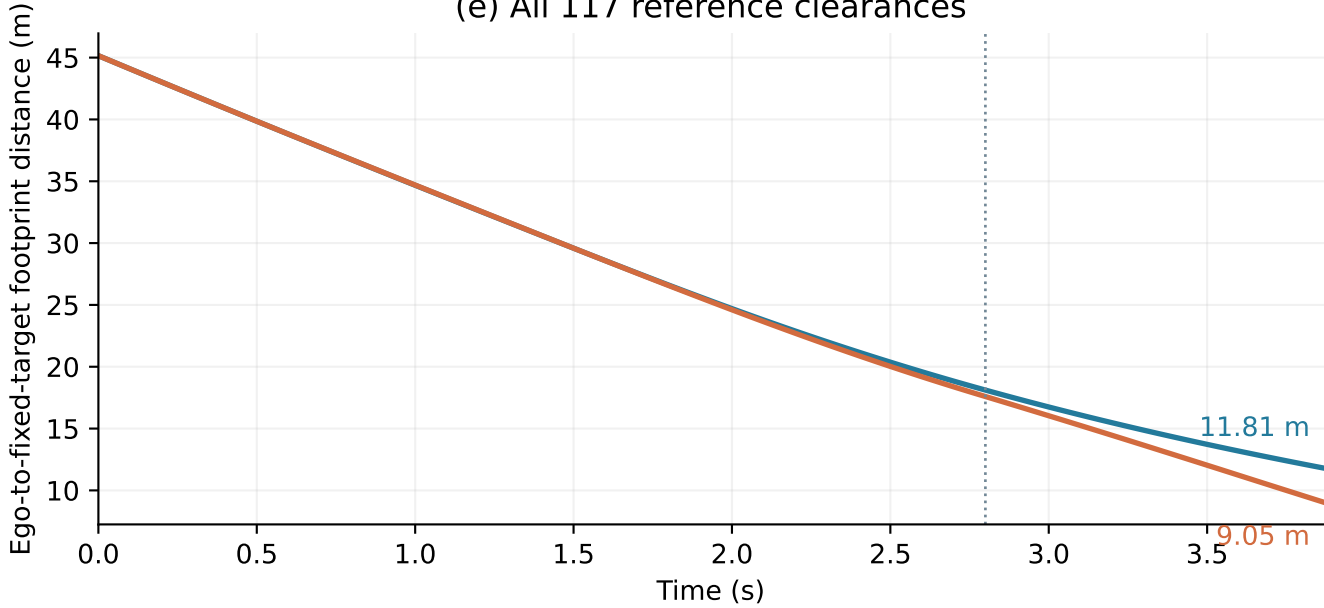

Input L/W/H: 3.90 / 1.70 / 1.28 m
Applied acceleration: +0.59 m/s²
At-own-ego reference: -2.19 m/s²

(d) All 15 applied-action errors

Fixed class dimensions Visible-extent fit

(e) All 117 reference clearances

Paired executed progress: RGB +2.757 m
Direct-state control -0.000150 m

Both runs: no fixed-reference overlap. Single seed; exposed development log. Shape and center change together. Snapshot chosen by largest paired action difference after shared startup. Ego paths already differ; images are not matched-pose renders.
